

pyQt6

Before start

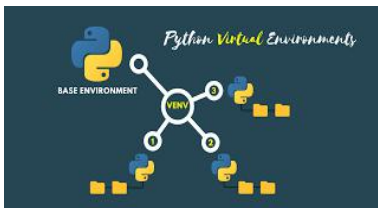

<https://docs.python.org/uk/3/installing/index.html>

pip is the package installer for Python. You can use pip to install packages from the [Python Package Index](#) and other indexes.

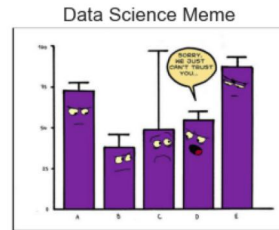

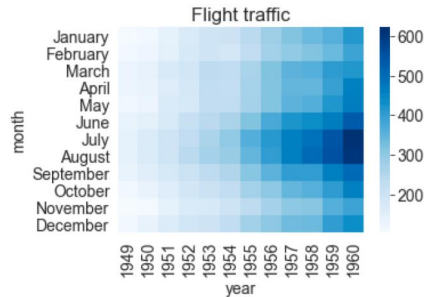

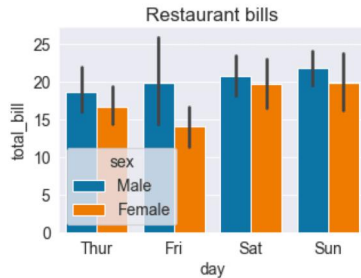

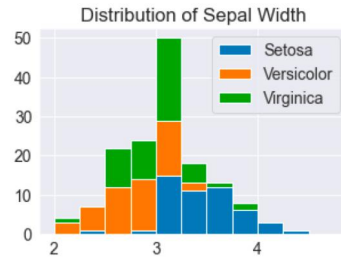

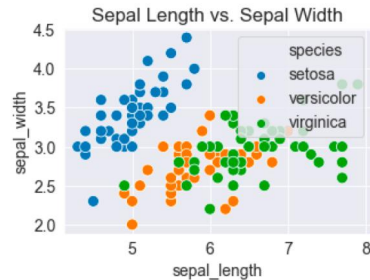

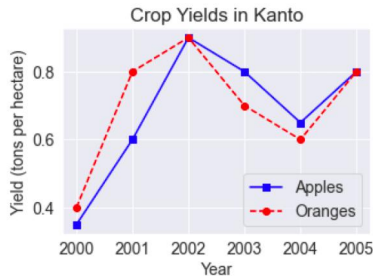

<https://docs.python.org/uk/3/library/venv.html>

The **venv** module supports creating lightweight «virtual environments», each with their own independent set of Python packages installed in their site directories.

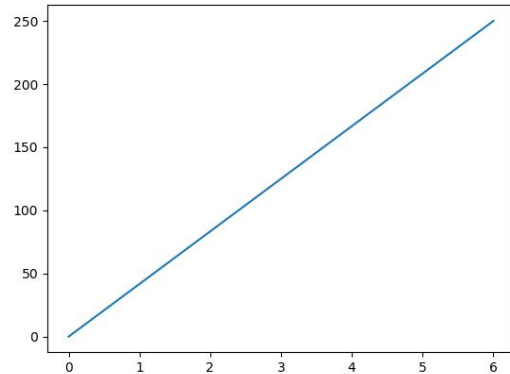

```
pip install matplotlib
```

Example

Draw a line in a diagram from position (0,0) to position (6,250):

```
import matplotlib.pyplot as plt
import numpy as np
xpoints = np.array([0, 6])
ypoints = np.array([0, 250])
plt.plot(xpoints, ypoints)
plt.show()
```

Python3 Versions

<https://github.com/pyenv/pyenv>

<https://youtu.be/sRWigXi8g6I>

```
sudo apt install -y make build-essential libssl-dev zlib1g-dev libbz2-dev libreadline-dev  
libsqlite3-dev wget curl llvm libncurses5-dev libncursesw5-dev xz-utils tk-dev libffi-dev  
liblzma-dev python-openssl
```

```
curl https://pyenv.run | bash
```

```
# Load pyenv automatically by appending  
# the following to  
# ~/.bash_profile if it exists, otherwise ~/.profile (for login shells)  
# and ~/.bashrc (for interactive shells) :  
export PYENV_ROOT="$HOME/.pyenv"  
[[ -d $PYENV_ROOT/bin ]] && export PATH="$PYENV_ROOT/bin:$PATH"  
eval "$(pyenv init -)"
```

```
# Restart your shell for the changes to take effect.  
# Load pyenv-virtualenv automatically by adding  
# the following to ~/.bashrc:
```

```
eval "$(pyenv virtualenv-init -)"
```

pyenv versions

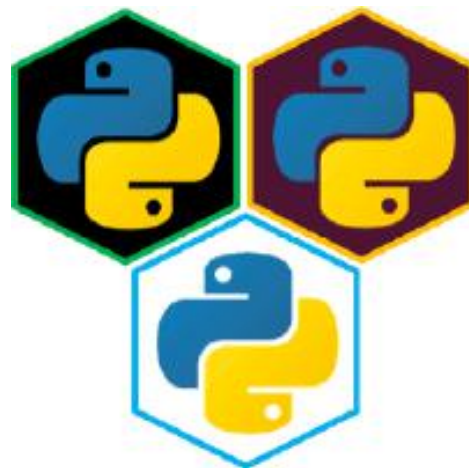

pyenv install --list

pyenv install 3.12

pyenv global 3.12

pyenv local 3.12
